Definitions:

Juvenile Photographer:

This definition is built around High School Students, but caters for young photographer no longer attending school. The photographer has turned 11 and is attending High School. Photographers no longer attending school but younger than 17 years (on the date of the show) will be considered Juvenile Photographers. Photographers 17 years and older who are not attending school will be Amateur Photographers.

Junior Photographer:

The photographer has not yet turned 12 and is attending Primary School. A photographer in High School is considered a Juvenile Photographer.

Professional Photographer:

For Section D of the Callide Valley Show a photographer who earns an income from their photographic work shall be regarded as a Professional.

Novice Photographer:

Section A - Class 18 (Open - Novice), A photographer who has not won 1st Prize in Section A at a previous Callide Valley Show.

General Photography Hints:

A photo should be about something. Decide what is the main point of your image and then compose your image accordingly. Do not include items that do not support the subject of your image.

If the colourful sky is the highlight of your shot do not fill the bottom half of the image with the boring land. Place the horizon at the bottom third of the image so that two thirds of the shot is that stunning sky.

If you divide your shot up with horizontal and vertical lines at 1/3 spacings to form a naughts and crosses grid (#) your final image will look better if the points of interest are placed along these lines or even better at one of the intersections.

Consider making the scene more interesting by taking it from a viewpoint not always observed by the viewer. Get up higher and look down or get down low and look up. Get really close.

For people photos (animals as well) the eyes are very important. You should focus on the eye so that in the final image it is sharp. To achieve highlights in the eyes have the subject look towards the light or use a flash. To avoid red-eye don't have the subject look directly at the camera or use an off camera flash.

Don't always use your camera in the horizontal, flip it 90 degrees and use it in the vertical mode. Photos of people often work better in the vertical or portrait mode. Photos of the countryside are often suited to the horizontal or landscape mode.

A good photographer also develops a good sense of light. They know how to see the light in a scene and are able to place the subject in the light and then use the shadows to add drama and mood to the image.

Above all remember there are no hard and fast rules. Keep using your camera, it will be the most important thing you do when becoming a better photographer.

Remember appreciation of a good photo is highly subjective – you will not always agree with a Judge's opinion and that doesn't matter.
